PROFESSIONAL SUMMARY

Freelance full stack developer since 2023, with both client systems and my own products running in production. Fourth-year Information Systems Engineering student at UTN FRSR. I handle the complete development cycle: requirements gathering, architecture, UX/UI design, backend, data modelling, testing and continuous deployment. I am looking for an internship or first formal IT role where I can contribute real end-to-end delivery experience and keep growing within a team with solid engineering standards.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Go, SQL, HTML5, CSS3

Frontend: React.js, Next.js, Vite, Tailwind CSS, SASS, Bootstrap, Responsive Web Design, PWA, UX/UI (Figma)

Backend & APIs: Node.js, Express, RESTful APIs, Sequelize, multi-tenant architecture, offline-first design, monorepos (Turborepo)

Databases: PostgreSQL, SQL, Supabase, IndexedDB (Dexie.js), relational modelling, ACID transactions, query optimisation (EXPLAIN ANALYZE, indexing), backup and restore

Testing & quality: TDD, BDD, unit testing (Jest / Vitest), manual verification before deployment, code review

DevOps & CI/CD: Git, GitHub, GitHub Actions, Docker, Docker Compose, continuous deployment, hosting, domain and environment management

Tools: Postman, Figma, GitHub Projects, Visual Studio Code, Cloudinary, Vercel

AI-assisted development: Claude Code, GitHub Copilot, AI API integration in production (Grok Vision)

SOFTWARE METHODOLOGIES & PROCESS MANAGEMENT

- Team-level Scrum and Kanban applied across academic and personal projects, with a GitHub Projects board and two-week sprints.
- Requirements in agile environments: user stories, acceptance criteria, estimation, and agile and Lean metrics.
- Software process models and life cycles: selection criteria per project and the process–project–product relationship.
- Software configuration management: configuration item identification, baselines, Git versioning and continuous practices (Continuous Integration / Delivery / Deployment).
- Product definition and planning: Lean UX and Design Thinking applied to discovery with real clients.

EXPERIENCE

Full Stack Developer — TARC Tech (own brand / freelance)

May 2023 – Present · San Rafael, Mendoza, Argentina (remote)

- **KiosControl** (own product): modular POS and business management system for small retailers, live in production with a real client. Built with offline mode and automatic sync, ESC/POS thermal printing, supplier accounts, a BI panel and multi-tenant architecture.
- **Modas Vanina:** e-commerce catalogue with an admin panel designed for a non-technical client, AI-generated product descriptions, image management and WhatsApp enquiries. Included a complete brand redesign (logo, colour palette and typography).
- **RestoZest:** restaurant management system for hospitality businesses: digital menu, POS, waiter panel and kitchen display (KDS) in an offline-first monorepo with a local hub that keeps service running without internet.
- **GatheringHR:** corporate website for an HR consultancy, with real-time job listings, dual lead-capture channels, responsive design and SEO optimisation.
- Deployment and operations: environment configuration, continuous deployment from the repository, and administration of hosting, domains and databases for each client.
- Discovery and technical consulting: translating business needs into requirements and architecture proposals for clients starting from scratch.

Collaborator & Systems Developer — UTN Emprende

November 2023 · Universidad Tecnológica Nacional (UTN FRSR)

- Developed the scoring and tabulation system used to evaluate the 15 teams and their entrepreneurship and innovation projects presented at the event.
- Coordinated the logistics of technical presentations and resource management for participating teams, keeping the event on schedule.

EDUCATION

Information Systems Engineering — 4th year, in progress

Universidad Tecnológica Nacional (UTN FRSR) · February 2023 – Present

Web Development & JavaScript

Coderhouse · March 2023 – September 2023

International General Certificate of Secondary Education (IGCSE)

University of Cambridge · June 2021

ADDITIONAL TRAINING & ACADEMIC PROJECTS

- **Software Metrics & Estimation** — Capstone project, Software Engineering & Quality, UTN FRSR (2026). An application for estimating, tracking and measuring software projects. Scrum Master / Agile Enabler in a three-person team: repository, sprint and task organisation, applying TDD, BDD and a continuous integration pipeline on GitHub Actions.
- Git and GitHub course — Universidad Tecnológica Nacional (September 2023)
- Data Analytics — Centro de Estudiantes de Ingeniería (August 2023)
- 39th JOSEII Student Guidance and Services Conference — UTN FRSR (April 2024)
- Foundations of Cybersecurity — Google (June 2024)
- Play It Safe: Manage Security Risks — Google (July 2024)
- Connect and Protect: Networks and Network Security — Google (August 2024)
